

This theory as to why we are suffering the coldest winters in all of recorded history is supported by principles learned in my careers as an electronics engineer and a high school physics teacher.

John DiNardo . . . May 2013

- ~~ Why all the Global Mega-Quakes over the past Decade?
- ~~ Why all the Bizarre, Destructive Weather?
- ~~ Why is the Geomagnetosphere Collapsing?
- ~~ Why are Earth's Magnetic Poles Deviating Exceedingly?
- ~~ Why are we Suffering the Coldest Winters in the Entirety of Recorded History?

The severe and extreme weather that has been afflicting Earth for at least the past decade is caused by a waviness that has been produced in Earth's jetstreams, as opposed to the normally smooth horizontal flow of the jetstreams which was typical throughout at least the latter half of the twentieth century. Earth's atmospheric jetstream patterns, over the past decade, reveal anomalous undulations which are steadily increasing,

- A) in north-south amplitude, and
- B) in east-west wavelength.

This extreme decade-long magnification (or ballooning) of the jetstreams' undulations indicates that Earth's solid metal *inner* core has been laterally forced off of its normal center point, and hence, that solid inner core has been revolving (rather than rotating) within Earth's outer core -- that sub-mantle cavity filled with molten metal; and thus, the consequence of this revolving, stirring action of the solid inner core is the deformation of Earth's magnetic field lines, from a state of erect verticality to a state of bowed/buckled verticality.

These vertically bowing and buckling magnetic field lines, in turn, are causing the normally smooth horizontal jetstream to undulate, with a steadily ballooning amplitude of north-south undulations, and with steadily lengthening east-west waving. This steadily magnifying roller-coaster-like contouring of Earth's jetstreams is caused by the anomalous bowing/buckling of Earth's magnetic field lines.

The root cause of this worrisome bowing/buckling of Earth's vertical magnetic field lines, and the consequent storm provoking north-south excursions of the jetstream -- along with the alarmingly rapid drifting of the geographic positions of Earth's magnetic poles . . . all of these ominously growing aberrations can be traced to what my observational study concludes is a shifting of Earth's solid metal inner core off of its center point, so that it no longer rotates, but it now revolves within the cavity filled with molten metal known as the outer core.

It is the growing amplitude of the molten metal outer core's waves which is causing this alarmingly rapid drift in the positions of Earth's magnetic poles, because the flow of the sea of free electrons which impregnates the molten metal outer core is becoming a diverted

flowing sea of electrons, since the molten iron outer core flow itself is undulating or waving in diversion from its normally smooth horizontal circular path. Within this sea of free electrons which impregnates the entire molten metal outer core, each sub-microscopic electron is loosely bound to its parent iron atom's nucleus, and is orbiting rather freely in the outermost valence band surrounding the nucleus of its parent iron atom. These free electrons of the outer core's sea of molten metal constitute a vast sea of electrons, each electron possessing an electric charge, which -- when that electron moves within the swirling flow of the molten metal outer core -- generates an electromagnetic field encircling the linear path of the flowing electron.

And so, as the outer core's whirlpool of molten iron circulates, like a hula hoop, within the belly of the Earth, its sea of free electrons constitutes a colossal circularly flowing circuit of electricity within Earth's swirling hula-hoop-like outer core. So, this swirling sea of free electrons is actually a belt of electric current wrapped around Earth's belly.

Physicists and electrical engineers know that electric charge in motion generates an electromagnetic field encircling the path of the charge's motion, like chemtrails billowing out and encircling an airplane's flightpath. Visualize an airplane flying in a huge horizontal circle. Its billowing and enlarging chemtrails would resemble the shape of Earth's magnetic field, which billows out and enlarges around Earth's swirling hula hoop-like inner whirlpool of molten iron. Thus, Earth's magnetic field is generated by that sea of circulating free electrons flowing within Earth's hula hoop-like whirlpooling molten iron outer core. This hula hoop-like sea of free electrons is *the* generating source of Earth's magnetic field.

Once again, visualize that airplane flying in a wide horizontal circle, with chemtrails billowing out and enlarging around the airplane's flight path. Now, visualize the nose of that airplane suddenly pitching upward and downward, so that the plane no longer travels in a level circle, but it now bobs, or undulates, through its circular flightpath. What shape, then, would those billowing chemtrails take? The billowing chemtrails would likewise undulate as the plane follows its wide circular flightpath. That is the same abnormal shape that Earth's magnetic field has now taken on. With the ever widening radius of the solid metal inner core's revolutions within the molten metal outer core will soon come an overcresting of the electron-impregnated molten iron outer core, so that a directional reversal in the overcresting flow (like in the C-shaped curling, or overcresting, of a surfer's wave) will naturally reverse the direction of the outer core's electron-impregnated wave of swirling molten metal, and when the swirl of this electrified molten metal sea overcrestingly reverses direction, then the polarity of its resultingly generated billowing electromagnetic field will correspondingly and momentarily reverse direction, from positive to negative or vice versa. I have seen these momentary reversals now and then in time progression pictures of the magnetosphere's trailing

edge, located at the outward-facing side (the night side) of Earth. So, when Earth is hit by a solar blast, the night side of Earth's magnetosphere often splits off, like crossed rifles, with the southerly vertical lines swinging northward, and the northerly vertical lines swinging southward.

However, these momentary reversals are not the cause of what may occur in the future, which will be a full and permanent reversal of the polarities of Earth's north and south magnetic poles. That would be a catastrophic phenomenon that has occurred repeatedly, at uniform 36 1/2 century intervals throughout Earth's ancient history.

The start of this global catastrophe has been, and will progressively be, provoked by an incoming dwarf star which N.A.S.A. has long since called "Planet X." In fact, you can find published on the Internet a N.A.S.A. document titled, "The Search for Planet X," by the late chief astronomer of the United States Naval Observatory, Dr. Robert S. Harrington.

Dr. Harrington's long since discovered dwarf star -- which he and the famous astronomer Percival Lowell (in 1910) called "Planet X " -- is the incoming object which will initiate the domino-like succession of Earth catastrophes which punctuates each consecutive 36 1/2 century period spanning Earth's entire history. Dr. Harrington's discovered incoming "brown dwarf star" will kickstart the chain of Earth catastrophes which we are already seeing and feeling, worldwide:

- epic rainstorms and floods,
- epic droughts,
- epic heat waves,
- epic frigid winters (due to these plunging "polar vortices"),
- epic earthquakes,
- epic volcanic eruptions,
- epic yoyo-like temperature excursions,
- epic hail storms,
- epic snow storms,
- epic hurricanes (extending across vast areas),
- epic straight-line windstorms (called derechos),
- epic dust storms (called haboobs),
- epic mud/debris slides (called lahars),
- epic tsunamis and rogue waves,
- epic excursions in Earth's magnetic poles,

This incoming celestial domino string trigger, which N.A.S.A. calls "Planet X," is being irresistibly pulled into our Solar System by our Sun's great gravitational force field. As always throughout ancient history, this periodically intruding dwarf star . . . this celestial pendulum, on its chronologically uniform periodic cometary intrusion into our Solar System, by its incoming electrical excitations upon the Sun, is electromagnetically impacting Earth's solid metal inner core, forcing it off-center to revolve within the molten metal cavity, which

is causing the molten metal's naturally even swirl to peak and dip in a rollercoaster-like pattern, which is causing Earth's atmospheric jetstreams (which run congruent to the molten core's flow pattern) to likewise flow in a rollercoaster-like pattern. Consequently, these extraordinary jetstream patterns are resulting in the decade-long train of meteorological disasters which have been plaguing our Earth.

Ancient historians, such as Pliny the Elder, recorded accounts that were ancient in his day: that Earth's rotational and axial motion shifted. Although it was many years ago, I still vividly remember a statement by my geology professor. He said:

"At one time in ancient history, Earth precessed on its axis -- and we don't know why!"

In this episodic discourse, a detailed explanation is given as to the map-like congruence of the wavy contour pattern of Earth's molten outer core to the wavy contour pattern of Earth's jetstream. This explains all the wild extreme severe weather, of all types, that has been afflicting Planet Earth over the past decade or longer.

From the H2 History Channel documentary, "Countdown to Apocalypse":

NARRATOR:

" . . . giving proof to the idea that a [magnetic] polar reversal may very well be underway, just as the storm cycle of the Sun kicks into high gear."

LAWRENCE JOSEPH:

"It is scary to think of the timing. As the Earth's magnetic field deteriorates, the solar activity accelerates. It's just bad luck!"

Lawrence Joseph does not understand that the deterioration of Earth's magnetic field is not at all "just bad luck." Rather, the deterioration of Earth's magnetic field is a direct result of chronic solar hyperactivity over the past decade or so. The Sun is the CAUSE; and this incipient magnetic pole reversal is the EFFECT.

When Earth's magnetic field is forced to become severely asymmetrical (by solar blast compression on Earth's Sun-facing side, and by solar blast elongation on Earth's dark side), then Earth's magnetic field, concentrated, like a fistful of arrows, within Earth's solid metal inner core, forces that inner core off of its center position at the heart of the Earth. If you have a cork floating at the center of a bowl of water, and that bowl is rotating on a potter's wheel such that the water swirls with a center vortex or whirlpool, and then you blow air forcefully and repeatedly at that cork, you can force that cork out of, and off of, that center vortex. Similarly, chronic solar blasts have been impacting Earth's magnetic field, and the electromagnetic energy generated by those electrified solar shotgun blasts, feeds into Earth's magnetic field,

coupling into Earth's geomagnetic field lines and riding those field lines all the way in from the outlying magnetosphere to the very center of Earth's core, wherein resides the solid metal nugget known as the inner core.

In the study of physics, this phenomenon of one electromagnetic field coupling into another magnetic field is the reciprocal effect of what is commonly known as "transformer action," wherein the electromagnetic field, billowing out from the primary coil winding of an electric transformer, couples into the electromagnetic field surrounding the adjacent secondary coil winding, superimposing its electromagnetic field pattern upon the electromagnetic field of its adjacent dancing partner, and thus the partner, Earth's magnetic field, becomes altered; moreover, deformed.

This electromagnetic reciprocal recoil effect is analogous to the kickback to the shoulder of a rifleman as he fires. If you were to get a close-up view of the rifleman's shoulder at the instant after the bullet is fired, you would see a momentary deformation of his shoulder; and this is a vivid example of Sir Isaac Newton's Third Law of Motion:

"For Every Action, There is an Equal and Opposite Reaction."

So it is with the electromagnetic fields generated by streams of electrified particles (electrons and protons) blasted out from the Sun, streaming into Earth's magnetosphere; these streams of Sun-shot electrons and protons generate electromagnetic fields, which clash with Earth's rotating magnetosphere, to both distend and, inversely, buckle the normally smooth symmetrical lines of Earth's magnetic field -- just as your image is distended and, conversely, buckled in its reflection off of the wavy contour of a funhouse mirror.

This is the mechanism by which the Sun's excessive emissions of electrified particles (protons and electrons), over the past decade, have electromagnetically fed their energy into the geomagnetosphere which envelops Earth, and ultimately into the focal point of the geomagnetosphere, at Earth's solid metal inner core. By this mechanism, the solid metal inner core is electromagnetically forced laterally away from its geocentrality, so that Earth's daily (diurnal) rotations no longer keep the inner core rotating at Earth's center, but cause the inner core to rotate while revolving around and about Earth's center point.

So, it is the electromagnetic energy from abnormally powerful and chronic solar blasting -- feeding itself into Earth's solid metal inner core -- that is forcing that solid metal inner core laterally away from its normal natural position at the very center of Earth. Consequently, that solid metal inner core not only rotates at the center of Earth, but it also revolves around that center point. There is a major difference between rotation and revolution. And it is the solid *inner* core's problematic change in motion from normal rotation to rotation plus abnormal revolution that is now creating wavelike turbulence within Earth's molten metal *outer* core.

Subsequent episodes of this dissertation will offer detailed theory

and analysis underlying this alarming phenomenon, which must prompt mankind to immediately prepare to protect itself from a long storm cloud of epic natural disasters now inexorably approaching us in the near future.

The world's ruling elite are fully aware of this approaching celestial wrecking ball, and that is why they are so frantically force-loading their "one-world government" upon the peoples of the entire World -- brusquely uprooting sovereign national governments, and slamming tyranny abruptly down upon our heads.

Author's Professional History:

Following my service as a U.S. Marine aircraft electronics technician, I earned the bachelor's degree in science education from Kean University, specializing in physics and biology, (cumulative grade point average: 3.44 of a maximum 4.00), and received state certification to teach all of the sciences in the high schools of New Jersey. My early career involved teaching twelfth grade high school physics, six classes daily.

Desiring greater creative latitude, I reverted to my previous career in electronics, working for the following companies: General Instruments, Inc., McGraw-Edison Co., Bendix Avionics Corp., MCI Corp., Dynalco Corp., Tektronix Inc., Industrial Timer Corp., Mobile-Vision Inc., and twenty years with Bell Telephone Laboratories/AT&T Bell Laboratories, inventing, building, and operationally proving electronic circuits used in developing AT&T's commercial and residential telecommunications products.

During those years, I attended Fairleigh-Dickinson University, taking courses in electrical engineering and in differential equations. My work and studies in the mutually related fields of physics and electronics involves the principles of electricity and magnetism, upon which is based my theory that Earth's solid inner core is revolving, and that these globally perilous revolutions are being caused by the Sun's electric/electromagnetic waves sweeping into Earth's magnetic field, and that the root cause of this chronic solar blasting is electrical provocations fired at the Sun by incoming comets which are gravitationally ganged to a Sun-drawn incoming brown dwarf star from deep space, which NASA has been concerned about for the past third of a century.

Part 2) Why the Geomagnetosphere is Collapsing SYNOPSIS:

The severe and extreme weather that has been afflicting Earth for at least the past decade is caused by a waviness that has been produced in the jetstream, as opposed to the normally smooth horizontal contour of the jetstream (displayed on late 20th century weather maps).

My observations of the jetstream over the past decade have

detected that jetstream undulations are steadily increasing A) in north-south amplitude, and also B) in east-west wavelength. This extreme decade-long magnification of the jetstream's undulations indicates that Earth's solid metal *inner* core has been forced off of its normal center point, and hence, has been revolving (rather than rotating) within Earth's outer core (the sub-mantle cavity filled with molten metal); and thus, the effect of this stirring action is the deformation of Earth's magnetic field lines, from a state of robust verticality to a state of contorted waviness. These contorted magnetic field lines, in turn, cause the normally smooth horizontal jetstream to undulate, with steadily expanding wave amplitude and wave length over the past decade.

The root cause of these perilous distortions in Earth's magnetic field lines, and the consequent storm provoking north-south jetstream excursions -- along with the alarmingly rapid drift in the geographic positions of Earth's magnetic poles . . . all of these dangerous aberrations can be traced to what my observational study concludes is a shifting of Earth's solid metal inner core off of its center point, so that it no longer rotates, but it now revolves within the molten metal outer core.

Imagine submerging the candy ball of a lollipop in the center of a cup of coffee, and spinning the lollipop stick between the palms of your hands. The candy ball rotates, but does not revolve, because it remains centered in the body of liquid. In your mind's eye, notice that the coffee swirls smoothly and evenly around the inside of the cup, without making waves. I verified this common phenomenon by taking a hand-held electric kitchen mixer and, using just one rotary beater attachment, submerged the rotating beater in a mixing bowl filled with water.

These examples of a lollipop or a beater rotating, but not revolving, at the center of a liquid filled cup or bowl, serve as a model of Earth's dominant core flow pattern. The core is comprised of a solid spherical metal inner core rotating at the center of a spherical cavity filled with molten metal swirling in a circular pattern.

The pressure exerted upon matter within the Earth increases with depth. At great depths, and consequently great pressures, Earth's metallic elements and compounds precipitate out from the nonmetallic matter. Hence, most scientists believe that, at the very center of Earth lies a solid, mainly iron "inner" core. Surrounding this inner core is a mainly iron molten "outer" core. Surrounding this molten outer core is a very thick (about 1,800 miles) magma layer called the mantle. However, this discourse concerns only the solid metal inner core and its surrounding molten metal outer core.

The main point to keep in mind is that, as long as the solid inner core is centered, it will rotate, but not revolve, and therefore, the surrounding molten metal within the spherical cavity will swirl in a smooth circular pattern, without being abruptly agitated, and thus,

without generating peaked waves.

The following is my theory as to phenomena of electricity and magnetism influencing, and even determining, the occurrence and the magnitude of various meteorological phenomena, such as wind, rain, snow, hail, lightning, and temperature excursions which are both extreme and abrupt. I believe that seismic and volcanic phenomena are also affected by phenomena of electricity and magnetism.

An atom of any metal possesses electrons in its outer valence band which are loosely bound (weakly electrically attracted) to the nucleus at the center of the atom. Therefore, these loosely bound outer valence band (orbiting) "free" electrons constitute a vast sea of negative electric charge distributed throughout Earth's molten metal outer core. Due to Earth's constant rotation, this sea of negative electric charge is atomically infused within, and thus swirling with, the molten metal outer core, just as silt particles would swirl within the vortices of eddy currents in a stream.

Now, a major phenomenon of electricity and magnetism is that a moving electrically charged particle, such as an electron, generates an electromagnetic field which encircles the path along which the charged particle is traveling. Visualize an arrow inserted into the core of a metal spring or coil. The arrow is analogous to the path of the moving electrically charged particle, and the coil is analogous to the invisible electromagnetic field generated by the moving charged particle. Another analogy would be an airplane generating a billowing chemical cloud encircling the airplane's flight path.

We see the application of this electromagnetic effect every day, around the world, in the operation of the common electric motor, wherein electrons are voltaically energized to flow through a copper wire which is situated near a permanent magnet. Surrounding the length of electrified wire that is the generator winding is a generated electromagnetic field which is alternately attracted to and repelled from a fixed permanent magnetic field. This push-pull action results in the rotation of the motor shaft, allowing for work to be done by the motor, such as rotating a fan blade or a food blender blade.

Returning to our visualization of Earth's smoothly swirling molten metal outer core, we see that the free electrons within the smoothly swirling molten outer core are as the free electrons moving through the wire of a generator. Now, visualize the wire being formed into a horizontal circle, sort of like a hula-hoop, with the free electrons racing as in a circular racetrack. A similar racing sea of electrons circulates within Earth's swirling molten metal outer core. This sea of electrons circulating within the swirling core generates a powerful electromagnetic field which billows out to encircle that molten metal hoola-hoop as if the hula-hoop were threaded through numerous rings. It is the sum of electromagnetic field rings threaded through the swirling circulating molten core -- like a horizontal necklace string threaded through vertical rings -- which comprises Earth's magnetic field.
